MAIN EXPORT COUNTRIES:

The company under the nd&@"Precizika Metrology" began work after the change of name of the Lithuanian - American Joint Venture "Brown & Sharpe - Precizika". The company has a proud history of old traditions in the leadership of design and production of metrological equipment. Its workforce has been involved for over fifty years in the supply of measuring technology and systems to automate factories as well as in the developmen of optical scale manufacturing technology.

In 2000, the production process was certified to fully meeting the requirements of EN ISO 9002:1994, in 2003 – EN ISO 9001:2000.

The company's goal is to consistently supply high quality products and services to meet customer demands on a timely basis. The company's many company company's many company c

products are linear and angular glass scale gratings, and the linear and rotary displacement measuring systems.

JSC "Precizika Metrology" represents worldwide known companies and suppliers of measuring equipment, CNC centers, executes installation and PHOTOELECTRIC MODULAR ROTARY ENCODER services of them, trains the users, and executes upgrading of used CMM and manual cutting machine-tools.

Photoelectric rotary encoder A75M is used to establish an informational link between the key machine components, industrial robots, comparators and DCC, NC or Digital Readout Units. It provides information about the value and direction of the motion. The encoder is used in automatic control, online gauging, process monitoring systems, etc. The absence of bearings and lubricants makes the encoder suitable for use in vacuum environment or when zero starting torque is required. The encoder consists of two assemblies: rotor/hub and scanning unit. The hub unit includes the grating disc fixed to bushing made from stainless steel. The scanning unit includes the base made of hard anodized aluminium. The base supports light source, reticle, photodiodes and other electronic components. The stator of the encoder is mounted to an object by means of screws. The hub is mounted directly on the shaft. Two versions of output signals are available:

- A75M-AV sinusoidal signals, with amplitude approx. 1Vpp;
- A75M-F square-wave signals TTL.

RECOMMENDED APPLICATIONS

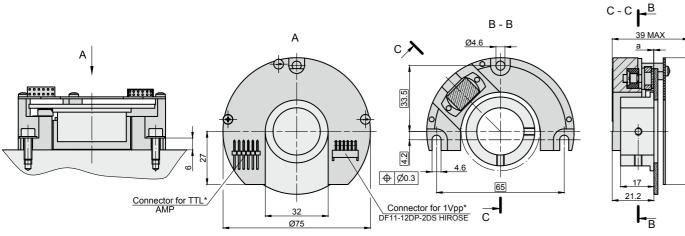

MECHANICAL DATA

Line number on disc (z)	512; 2048 (others on request)		
Number of output pulses per revolution for A75M-F	Z x k, where k= 1, 2, 3, 4, 5, 8, 10		
Max. permissible mechanical rotation speed	16000 rpm		
Accuracy $(T_{1}$, period of lines on disc in arc. sec.)	$\pm 0.1T_{_1}$ arc. sec.		
Permissible axial shaft run out	±0.05 mm		
Rotor moment of inertia: - with shaft Ø 20 mm - with shaft Ø 30 mm	26x10 ⁻⁶ kgm ² 35x10 ⁻⁶ kgm ²		

Protection (IEC 529)	IP00
Max. weight	0.2 kg
Operating temperature	0+85 °C
Storage temperature	-30+85 °C
Maximum humidity (non-condensing)	98 %
Permissible vibration (55 to 2000 Hz)	≤ 100 m/s ²
Permissible shock (6 ms)	< 1000 m/s ²

- 1. Maximum working rotation speed (with proper encoder counting) is limited by maximum operating frequency and maximum mechanical rotation speed.
- 2. If cable extension is used, power supply conductor cross-section should not be smaller than 0.5 mm ².
